Fall-to-Fall retention rates are calculated for first-time students enrolled in a degree, diploma, or certificate program. The retention rate is determined by identifying a cohort of new students for a given Fall term and then calculating the percentage who either:

a) re-enrolled in the subsequent Fall, or b) completed their program before the start of the next Fall term. This percentage is found by dividing the number of students who met either of these criteria by the total number of students in the original cohort.

² Native Hawaiian or Other Pacific Islander' students are not included in the visualization due to low enrollment, which may result in less reliable data representation.
